

This document defines the complete activation logic, data retrieval process, signal filtering rules, research steps, structured output format, and deep-dive offer for **Skill 1** of the Tricentis Competitive Intelligence Research Agent. Tracked competitors: **AccelQ, Keysight, OpenText, Playwright, UiPath**.

ACTIVATION

When to Activate Skill 1

Activate when the user asks about a tracked competitor's current positioning, products, recent activity, or needs deal prep against one of the five tracked competitors.

Example Phrase	Intent
"What's new with [Competitor]?"	General update request
"What do we know about [Competitor] right now?"	Current intel request
"Catch me up on [Competitor]"	Summary request
"What changed with [Competitor]?"	Delta-focused request
"How is [Competitor] doing?"	Status check
"I have a deal against [Competitor] tomorrow"	Deal prep — highest priority

STEP 1

Pull the Latest Run Data

Locate the most recent run directory for the competitor and load all five source files:

data/<competitor>/<YYYY-MM-DD>/<HH-MM-SS>/

File	Contents
competitor_raw.json	Product pages and website content
social_media_raw.json	LinkedIn, X/Twitter, YouTube RSS feeds
analyst_raw.json	Forrester search results and analyst coverage
review_raw.json	PeerSpot reviews and customer sentiment
delta_report.json	Line-level diff of what changed since the previous run

Also load **data/<competitor>/ci_report.json** if present — this holds the last structured AI analysis and serves as the baseline positioning snapshot.

Always open the response with: "Latest data is from [date] at [time], compared against [previous run date]."

STEP 2

Extract Delta Signals

Read **changed_pages** from delta_report.json. Apply the two-pass filter below to separate noise from actionable intel.

FILTER OUT — Noise	FLAG — High Signal
• Follower count increments of ±500 or less • Timestamps: 'Xm ago', 'Xh ago' • Cookie consent banners or bot verification walls • Generic pagination numbers or UI counters • PeerSpot global peer count changes	• New blog post titles or article headlines • Product names, feature names, or capability descriptions • Pricing or packaging language • Partnership, acquisition, or funding mentions • Case study or customer story titles • Analyst report mentions (IDC, Gartner, Forrester) • Hiring/headcount shifts (growth signals) • New taglines or homepage messaging changes • Press release titles • Event or product launch announcements

For each high-signal change record: the source URL, the exact added line(s), the removed line(s) if relevant, and the source type (website / social / analyst / review).

STEP 3

Load CI Report Context

If **ci_report.json** exists, extract the following to frame the baseline:

- Last AI-generated competitive summary
- Overall positioning snapshot (strengths, weaknesses, market standing)
- Any previously flagged threats or opportunities

The CI report is the baseline. The delta from Step 2 layers on top as "what is new since then."

If no CI report exists, rely on training knowledge of the competitor and the raw scraped content from the current run.

STEP 4

Research High-Signal Changes

For each high-signal item from Step 2, take the appropriate research action based on signal type:

Signal Type	Required Action	Extract
New blog post or press release title	Use WebFetch to retrieve the full article	Core announcement, product names, customer names, metrics claim
New social post	Read full text from scraped content	Campaign angle, vertical, customer reference, product or event ment
Analyst mention	Note the publication, search for public summary	Analyst quote, positioning language, comparison to competitors
Website messaging change	Compare old and new lines directly	Characterize the strategic shift — what changed and why it matters

Always summarize findings in 1-3 sentences of finished intel. Never pass raw diff lines to the user.

STEP 5

Deliver Structured Output

Deliver every Skill 1 response in the following exact format. Do not skip sections even if data is thin — note the gap rather than omitting.

HEADER	■ Intel Brief: [Competitor Name] Data from: [run date/time] vs. previous run: [previous run date] Sources: [X pages scraped]
SECTION 1	What's New Since Last Run For each high-signal item: [Source: Website / LinkedIn / Twitter / YouTube / Blog / Press Release] > "[Exact or paraphrased new content]" Intel: [1-2 sentence interpretation — what it means for Tricentis, which verticals or deals it affects]
SECTION 2	Current Positioning Snapshot Core message right now: [what homepage/social is actively pushing] Target buyer: [enterprise / developer / SMB / specific vertical] Key product being promoted: [product name and angle] Analyst standing: [Gartner/Forrester position if known]
SECTION 3	Customer Sentiment (PeerSpot) Praised for: [top 2-3 themes from reviews] Complained about: [top 2-3 themes from reviews]
SECTION 4	■ ■ AE Battle Notes

Use in discovery:

- "[Question that exposes their weakness based on current intel]"
- "[Question that exposes their weakness based on current intel]"

Talk track for today:

"[1-2 sentence AE-ready statement based on what is new]"

Watch out for:

- [New claim, case study, or announcement the prospect may raise]

SECTION 5

Data Quality

Source | Status

Competitor website | OK / Partial / Blocked

LinkedIn | OK / Login wall

X/Twitter | OK / Limited

YouTube RSS | OK / Error

Forrester | OK / Partial

PeerSpot | OK / Blocked

Last scraped: [date/time] — next run: next Mon/Wed/Fri at 8:30 AM Central

STEP 6

Offer Deep Dive

Always close every Skill 1 response with the following offer to the user:

- Fetch and read the full text of any new blog post or press release
- Pull a full battle card for an upcoming deal (activates Skill 2 output format)
- Compare this competitor's current messaging against Tricentis positioning
