

Skill 2 — Ad-Hoc Research

Tricentis Competitive Intelligence Research Agent • Logic Specification

Trigger Phrases

- "Research [Company]"
- "What do we know about [Company]"
- "Look into [Company]"
- "I'm in a deal against [Company]"
- "Give me intel on [Company]"
- "Who is [Company]"

Step 1 — Pipeline Check

Check **scrapers/<competitor-slug>/** for existing scraper files.

EXISTS	Use configured URLs as primary sources. Tell the user the competitor is already tracked in the pipeline.
NOT FOUND	Tell the user this is an untracked competitor and research will be conducted ad-hoc.

Step 2 — URL Discovery

Discover URLs across four source types. Present them organized by type and confirm with the user before researching.

Website

- Homepage
- Core product / platform pages
- Pricing page if public
- Press release, newsroom, or blog
- Any "vs" or comparison pages they publish

Social Media

- LinkedIn: <https://www.linkedin.com/company/{slug}/>
- X/Twitter: <https://x.com/{handle}?lang=en>
- YouTube: <https://www.youtube.com/@{handle}> — also resolve the channel ID (UCxxxxxxx) for RSS feed wiring: https://www.youtube.com/feeds/videos.xml?channel_id=

Analyst Coverage

- Forrester:
<https://www.forrester.com/allSearch?query={CompanyName}&publishedSinceInDays;=30&activeTab;=All>
- Gartner Peer Insights vendor page if available
- Any public Magic Quadrant or Wave landing pages

Review Sites

- PeerSpot reviews: <https://www.peerspot.com/products/{slug}-reviews>
- PeerSpot vendor: <https://www.peerspot.com/vendors/{slug}>
- TrustRadius if available
- Note: G2 and Capterra excluded — Cloudflare blocks access

Step 3 — Research & Synthesis

Visit each URL and extract the following. Flag anything unavailable in data quality notes.

From Competitor Website

- Core value proposition and tagline
- Key product names and capabilities
- Target customer segments and industries
- Technology differentiators (AI, codeless, cloud-native, etc.)
- Pricing model if visible
- Recent news, press releases, announcements
- Any competitive comparison content they publish

From Social Media

- Recent posts and active messaging themes
- Follower and employee counts (growth signals)
- Hiring activity (signals investment areas)
- Tone — enterprise, developer, SMB?

From Analyst Coverage

- Gartner Magic Quadrant or Forrester Wave positioning
- Analyst quotes on strengths and weaknesses
- Market category positioning
- Recent analyst mentions (last 30 days)

From Review Sites

- Overall customer sentiment
- Top praised capabilities
- Top complaints
- Common use cases from real users
- Any mentions of Tricentis in reviews

- Competitor switching stories ("we moved from X to Y because...")

Step 4 — Structured Output

Deliver a full CI report in the standard format:

#	Section	Contents
1	Executive Summary	3-4 sentences — lead with current market position and the single most important thing to know going into a deal
2	Company Overview	Table: Founded, HQ, Size, Funding/Public Status, Primary Market
3	Core Products & Positioning	Each product: name, what it does, who it targets, key differentiator
4	Current Messaging Themes	What they are actively pushing right now (website + social)
5	Recent Activity	Last 30-90 days — announcements, releases, campaigns, hires
6	Analyst Standing	Gartner and Forrester positioning, or "not found in public sources"
7	Customer Sentiment	Overall rating, top 3 praise points, top 3 complaints
8	Tricentis Battle Notes	Where we win, where they win, key differentiators, landmines, suggested talk track
9	Top 3 Actionable Intel	The three most important things to know right now
10	Data Quality Notes	Status per source type: OK / Partial / Blocked / Not found

Step 5 — Pipeline Prompt

"Say 'Add [Competitor] to the pipeline' and I'll generate the scraper files and open a GitHub PR."

Key Constraints

- Never fabricate data — if a source was blocked or unavailable, say so in data quality notes
- Always confirm discovered URLs with the user before beginning research
- Always note how current the information is
- Flag anything deal-relevant as ■ Actionable Intel

- Never echo API keys, credentials, or secrets in any output
- Never use Playwright as a scraping tool — Selenium only
